agentgateway

Where Did All My Tokens Go?

Using agentgateway to Keep Your AI Usage Under Control

Attribute every token. Price every request. Enforce every budget.

Shane O'Donnell

VP Engineering, Solo.io · October 22, 2026

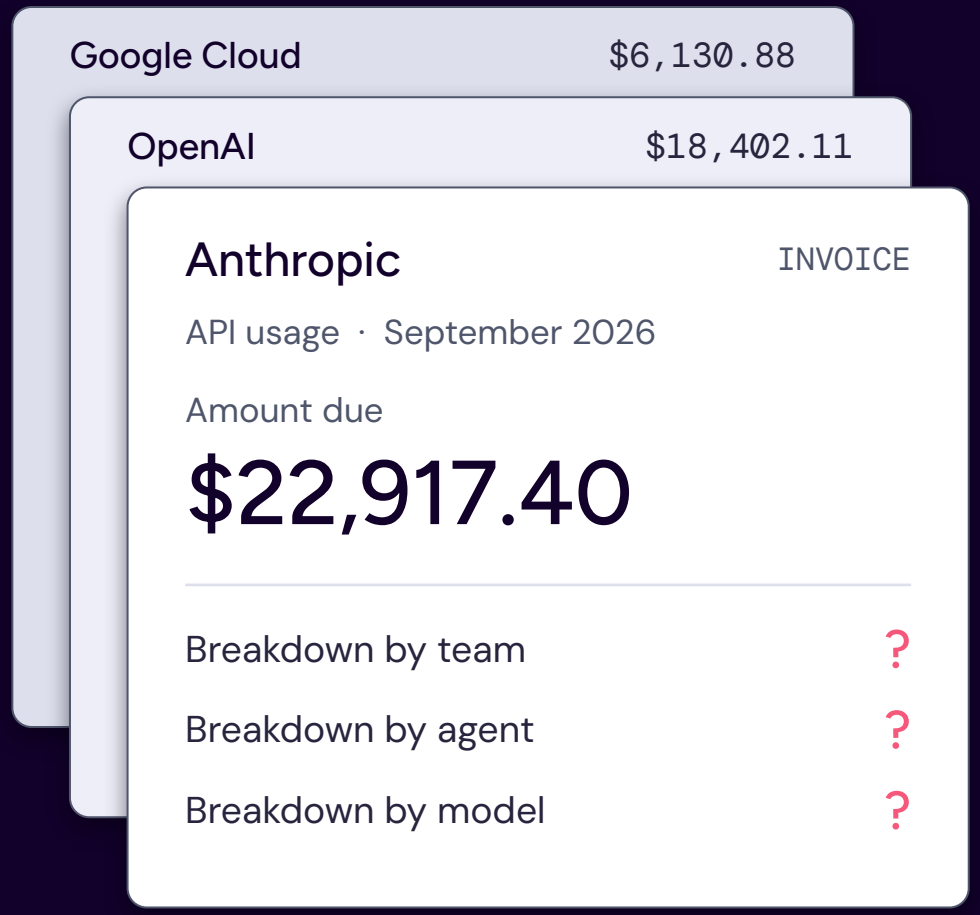

SOLO.IO

QUICK QUESTION

Who spent all the tokens last month?

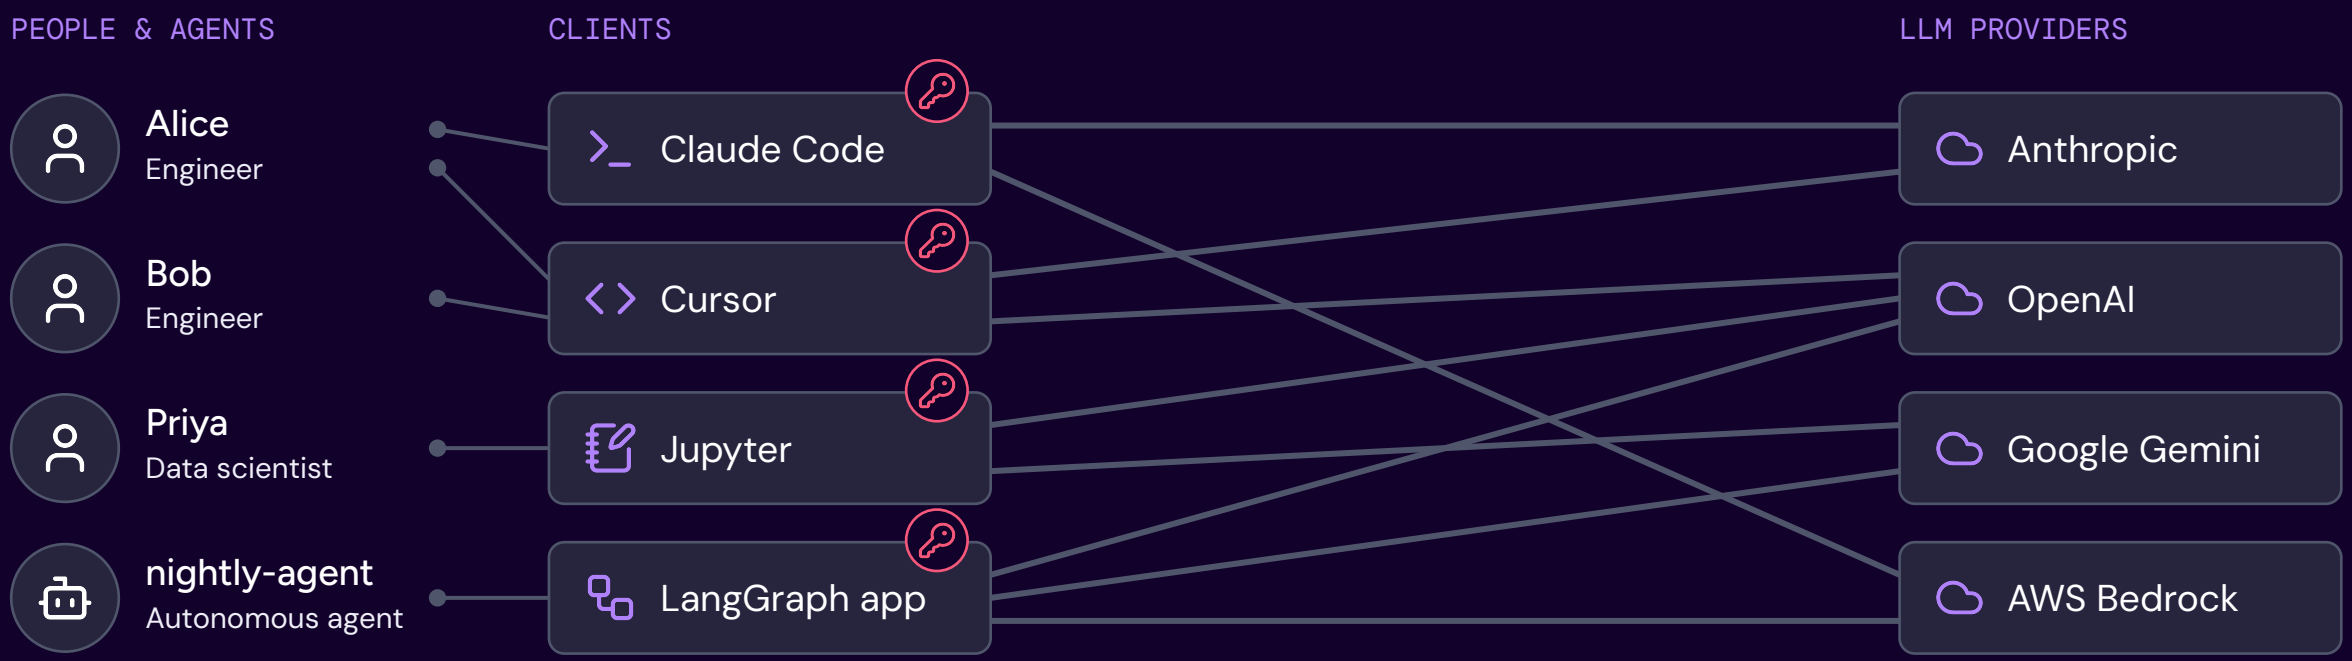

For most teams, the invoice is the first place they find out.

Which team? Which agent? Which model?

WITHOUT A GATEWAY

Keys everywhere, visibility nowhere

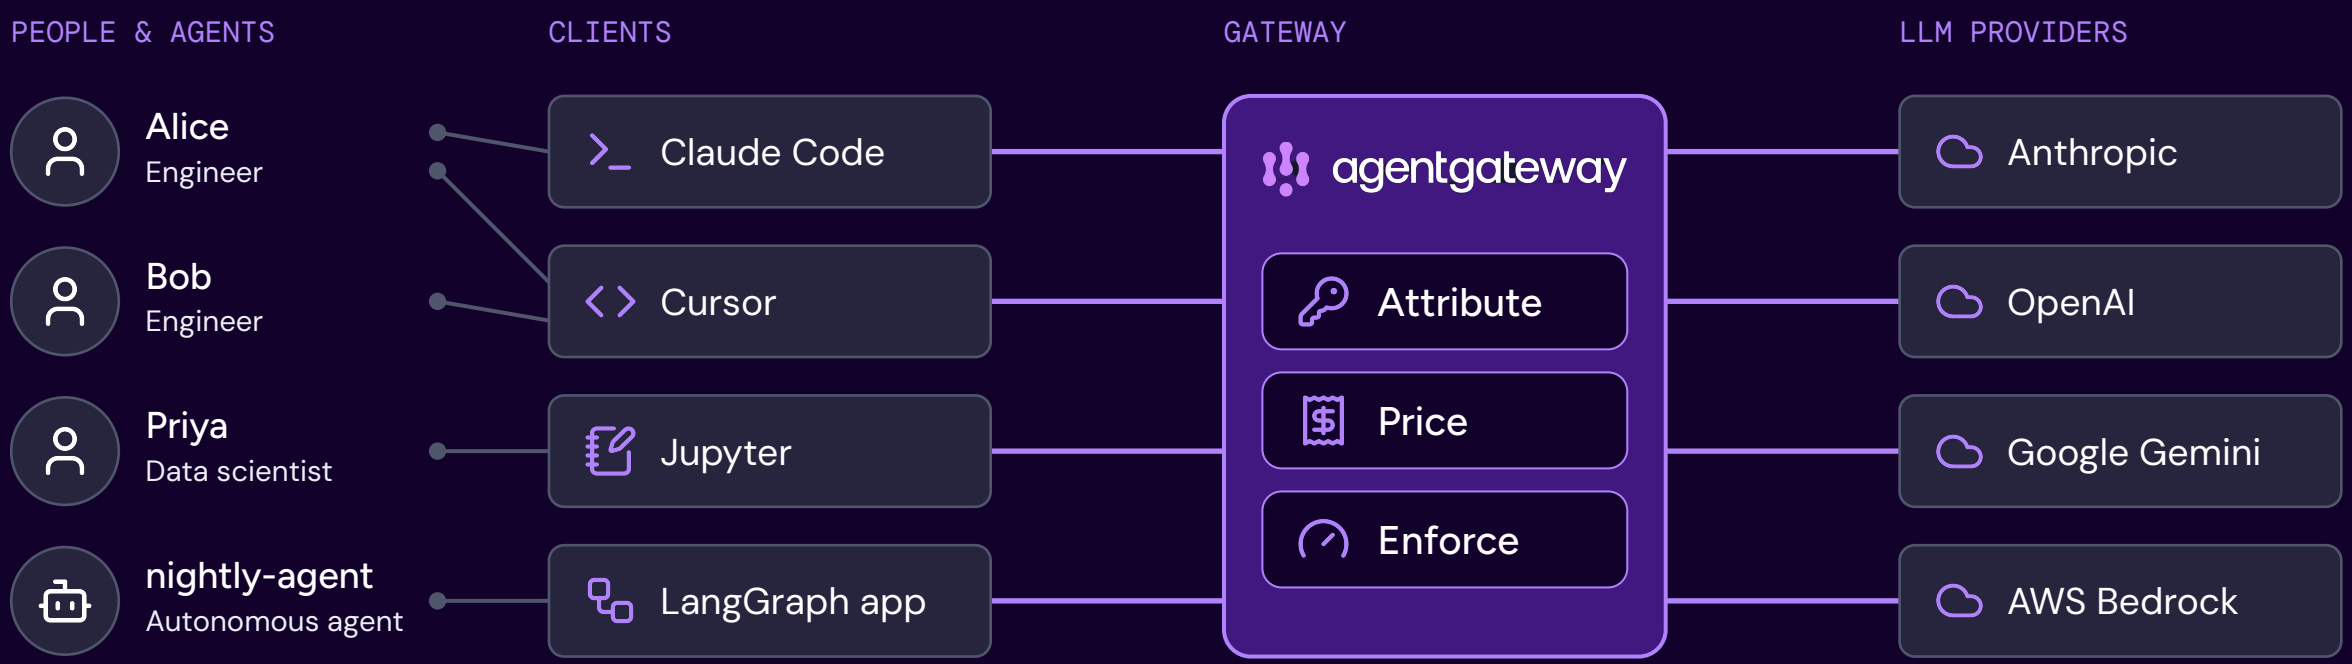

Provider keys in every tool

No idea who spent what

Nothing stops a runaway loop

WITH AGENTGATEWAY

One front door for every token

One key per person or agent

Every request owned & priced

Budgets enforced in one place

MEET AGENTGATEWAY

AI-native, without skipping the gateway basics

What it is

One open-source data plane, written in Rust

Inference routing

Smart routing for models you host yourself

LLM gateway

Every major provider behind one API

MCP & A2A

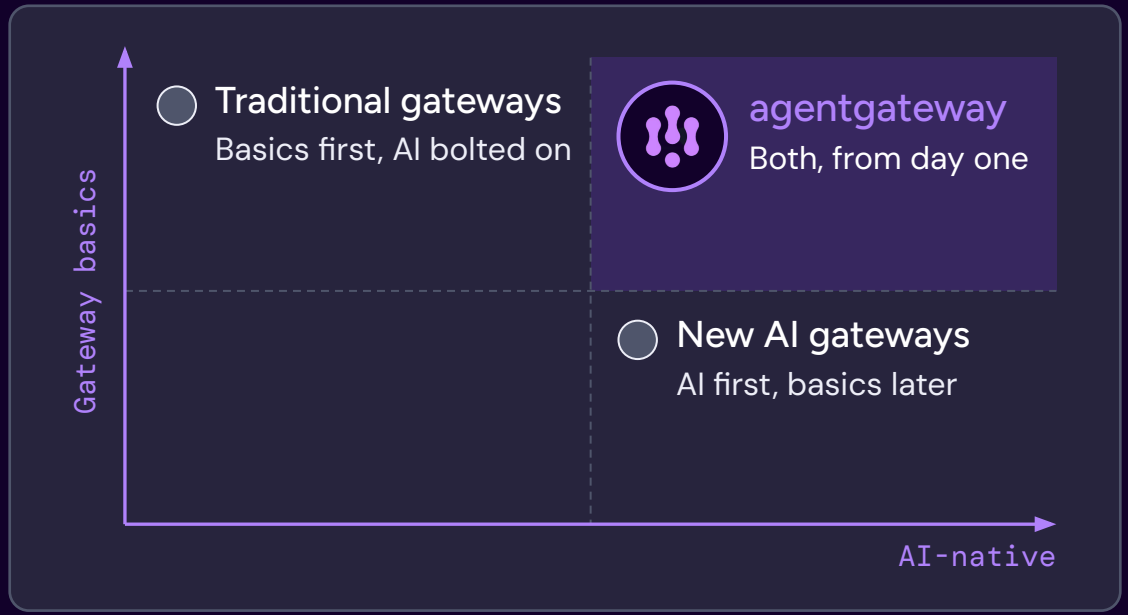

Tools and agents, with auth and filtering

API gateway

HTTP & gRPC with TLS, auth, rate limits

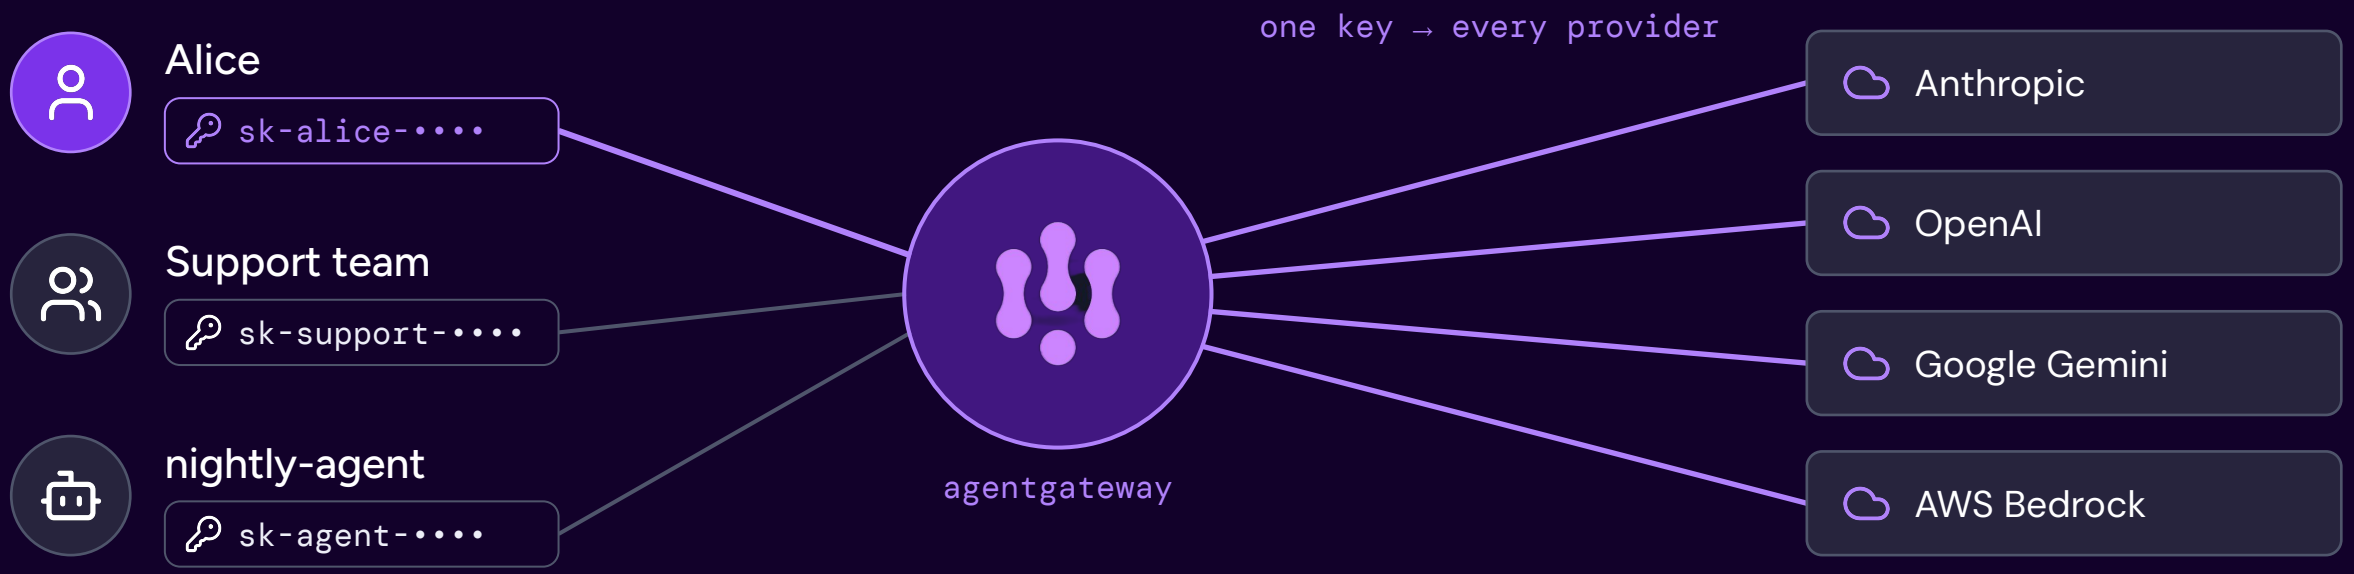

Why we built it

Most gateways only get half of it right

Created at Solo.io by the kgateway team, after years of building production gateways

Every request gets an owner

Keys per person, team, or agent

Provider keys stay in the gateway

Key name on every log & trace

Every request gets a price tag

REQUEST RECEIPT #8f3a2c

key	alice
model	claude-sonnet-5
provider	anthropic
tokens	12,480 in · 1,932 out
rate	$3 / $15 per 1M tokens
cost	$0.066

Priced from a model cost catalog. `agctl catalog import` pulls real provider rates.

Slice by user, model, or provider, and spot the runaway before the invoice does.

Budgets that say no before the invoice does

Spend windows

key: nightly-agent

A 5-hour window plus a weekly cap, like your Claude Code plan

5-HOUR WINDOW $20.35 / $20.00

WEEKLY $58.10 / $100.00

Next request: 429 budget_exceeded

Model allow-lists

Not every key needs the frontier model

alice	claude-* gpt-5*
intern	*-mini
nightly-agent	gpt-5-mini

Wrong model: 403 model_not_allowed

Rejected requests never reach the provider

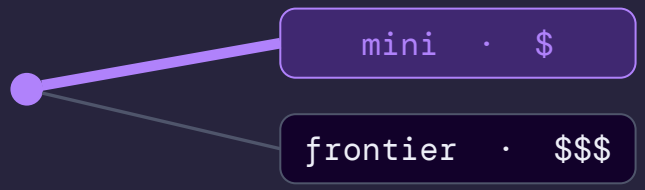

Not ready to block? Audit mode just logs it

BONUS · OPTIMIZE

Spend smarter, not just less

Route

One model name for clients. Cheap by default, frontier on purpose, failover built in.

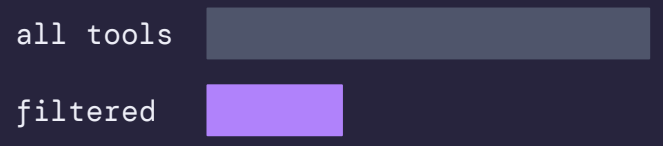

Cache

Semantic caching: the same question shouldn't cost you twice.

Trim

Expose only the MCP servers and tools each caller needs. The rest never reach the prompt.

tool definitions in the prompt

LIVE DEMO

From install to enforced budgets

SETUP		ATTRIBUTE	PRICE	ENFORCE	
1	2	3	4	5	6
Install	**Add models**	**Virtual keys**	**Cost analytics**	**Spend windows**	**Model allow-lists**
Standalone binary, one command	Multiple providers, one endpoint	One key per user, every provider	Spend by user, model & provider	5-hour + weekly dollar caps	Keys limited to specific models

Follow along on your own machine

```
>_ curl -sL https://agentgateway.dev/install | bash
```
